

Project Management Engineering Consultancy Services

**Ensuring Safe and Successful
Execution of your Projects**

Indepth expertise in Project Management Consultancy

CARPE's Project Management & Engineering Consultancy business unit supports contract execution throughout the project life cycle and provides a single point of customer contact. Teams are staffed by experts with extensive experience managing large engineering & process contracts and helping clients control the cost of their investments.

- Engineering, Procurement and Construction on Lump Sum Turnkey basis (EPC-LSTK)
- Engineering, Procurement Management and Construction Management (EPCM)
- Project Management Consultancy (PMC)

**We Provide
Eco-Friendly Process
& Engineering Solutions**

Managing large-scale projects takes more than exceptional project execution capabilities and advanced monitoring tools. It requires people experienced in achieving successful outcomes on large undertakings.

The EPC Contractor & PMC

We help clients achieve their investment objectives and deliver projects by consulting at every project phase. From technology and licensor selection to management of multinational consortia and delivery of turnkey projects, our experts have carried out some of the world's most challenging EPC projects.

CORE VALUES: In our commitment to excellence, we are guided by a set of values that defines who we are and the way we work.

- 1. Integrity:** We value honesty, trustworthiness and high ethical standards.
- 2. Excellence:** We strive for excellent performance in everything.
- 3. Passion:** We are passionate about growing our business globally.

QHSE: An Absolute Commitment

CARPE is committed to leading the industry in quality, safety, and environmental integrity – providing the best project management practices while ensuring a safe environment for employees, clients, partners, EPC contractors, and subcontractors. Employee health and safety is a core value and an absolute commitment, guided by our longstanding health, safety, and environmental program.

We have a value-driven program that focuses on leadership and communication to change behaviors and embed a health, safety, and environment culture across the company. It emphasizes training at all levels of staff, starting with senior management, whose embrace of these goals is essential.

- 4. Innovation:** We value innovative efforts, ideas and methods to continually improve our business processes.
- 5. Team Work:** We work as one team to achieve our corporate goals.
- 6. Safety:** We pay careful consideration to the health and safety of our employees at the workplace.

Consultancy for all types of projects

CARPE is a emerging player in large EPC project implementation and has developed a comprehensive competency in project management.

What we provide

The success of a project with respect to cost-effectiveness, schedule compliance, safety, operability, and maintainability depends on the project management team and how it integrates with the EPC contractor's project team and the client's representatives. Here's what we provide.

● Project Management

We manage and integrate the engineering, procurement, and construction phases of the project. Clients with large, complicated capital projects, sometimes in challenging locations, often appoint us their overall program manager. Acting as the single point of contact, we consolidate all contractors and subcontractors, often from diverse cultures and backgrounds, to deliver a successful project.

● Resourcing Strategy

We identify personnel with relevant experience, maximizing use of local/regional staff and people with local experience.

● Project Controls

A detailed understanding of project costs and schedule is critical to effective monitoring. We draw from the group EPC experience to enhance our project management and control capabilities.

● Engineering and Procurement

We focus on the details in defining requirements, aligning stakeholder teams, and ensuring a disciplined approach to implementation.

● Construction

CARPE focuses on safety, schedule, costs, staffing, quality, and methods to ensure successful facility construction. Our experience in executing EPC projects allows us to effectively manage and mitigate risk.

● Commissioning

In the commissioning phase, we focus on safety, cleanliness, adherence to specifications, and on-time completion. Our experience in directly commissioning grassroot and brownfield facilities ensures a smooth commissioning phase, with easy access to advice on all aspects of the plant.

Industry Focus

Carpe undertakes challenging Indian and global projects, with operations spread across sectors having dedicated team of experts working to service industry as a whole :

Automotive | Electric Battery Operated Vehicle | Machine Tools Manufacturing | Automatic Machine Process & Manufacturing System | Food & Beverages | Edible Oil Processing & Refining | OleoChemicals | Biodiesel | Animal Feed | Healthcare | Non - Conventional Power Generation | Oil & Gas Processing | Petroleum Sludge Oil Refining & Refinery Waste Management | Petrochemical & Liquified Natural Gas | Gas Transportation & Handling - Offshore & Onshore services | Distribution & Cross Country Piping Fertilizers | Cryogenics Engineering | Nuclear Power & Engineering | Infrastructure & Industrial Projects | Polymer & Polymer Product Engineering | Feed Stock Management Solution | Research & Development Projects | Shipping & Logistics Solutions | Special Purpose Freight cargo containers | General Purpose Cargo Containers, Thermal Containers & Tank Containers for Liquids, Gases & Pressurized Dry Bulk as per ISO Standard, ABS, IACS & IMO

Risk Integration Project Schedule

We Actively Manage Project Risk By:

- Meeting quality, health, safety, and environmental expectations, including flowdown through the prime, sub, and sub-subcontractors.
- Delivering on schedule and meeting budget targets.
- Obtaining experienced, qualified personnel.
- Managing contractors, especially during the EPC phase.
- Delivering fit-for-purpose facilities.
- Achieving national content targets.
- Using proven software tools.

An Integrated Approach

Our Project Management Consultancy business unit offers wide-ranging services to manage all project phases: feasibility studies, basic design and FEED, detailed engineering and procurement, construction, commissioning, and start-up. We team up client and CARPE personnel as needed, with no duplication of roles.

Timely Mobilization and Global Sourcing

We understand the challenges clients face in awarding contracts “as planned”. Consequently, our project teams mobilize immediately following contract award. Our staffing process coordinates global sourcing, identifies skilled personnel, and submits qualified candidates.

As a global company, CARPE has a diverse workforce, with personnel and consultants from many backgrounds, geographic locations, and cultures, making our teams creative and dynamic. Our global presence enables us to mobilize people with the right experience in the right place at the right time.

How clients benefit from our experience

Operators face challenges that can influence project value – for example, where to focus often scarce resources and how to optimize existing assets.

Experienced Personnel

We work with a team located near where the project is being carried out. Depending on the technology involved, different centers of excellence assign personnel to support specific project requirements. HR facilitates and promotes local employment to further the group's expertise and diversity. Our business model is structured to supplement CARPE's staff with qualified personnel hired from markets where the most experienced engineering and project resources are available.

Effectively Staffing a Team is a Complex Process

It involves:

- Identifying candidates from the existing staff, and ultimately from external sources.
- Processing CVs.
- Obtaining client approval.
- Initial interviews by HR and technical departments.
- Face-to-face interviews.

The number of applications received can be enormous, overwhelming the HR and technical resources and causing significant delays in mobilizing the team. We manage the entire process, enabling the client to focus on the most important project management issues.

Technology Experience

CARPE's broad range of process technologies, capabilities, and experience complement its project management consulting role. To ensure attainment of clients' project objectives, we provide:

- Access to process optimization expertise.
- Access to current market benchmarking information.
- Experience as a FEED and EPC contractor.
- Close client relations and effective communications.
- Design and execution expertise that is practical, cost-effective, and fit for purpose.

Contracting Experience and Management

- Our commitment to quality, safety, health, and the environment produces outstanding results in all project phases.
- Our EPC contracting experience gives our teams unique insights and expertise in managing each project phase.
- Each project management consultancy team is equipped to optimize designs and recommend realistic execution plans.
- Proven software tools facilitate detailed analysis, optimization, and forecasting of future performance for effective management of project schedule and cost.

State of the art tools

Specialized Software Tools Support Project Delivery

Our software provides the visibility needed to effectively manage project risks and opportunities. These tools provide perspective, encourage collaboration, and can identify options and simulate potential outcomes for the project team and for executive management. It's how we unite project teams partners, contractors, and clients - in a common understanding of goals and strategy.

Interface Management

Managing interfaces is a major challenge on large projects, notably in identifying where contractors' scopes overlap and where there are assignment gaps. Every project stakeholder depends on successful management of these interfaces. The ability to create project teams that work together, with experienced people bringing best practices and practical experience, is critical to success.

Dedicated Tools

CARPE has a number of proprietary and vendor-developed software tools to manage collaboration, visibility, decision-making, and follow-up:

- Primavera P6
- xDB - Document Management System
- IMT - Interface Management Tool
- Acumen - Suite of schedule benchmarking, risk analysis, and simulation capabilities
- CMS - Construction Management System
- CDB - Change Management Tool
- Bwise - Risk Management Tool
